PROVIDING SERVICES & SOLUTIONS TO ASSIST COMPANIES IN MANAGING AND SECURING DATA SYSTEMS

Today your business requires reliable secure access to critical applications and information. This makes data security and system availability one of the primary issues facing businesses today. Trying to plan proactively while keeping up-to-date with all of the latest security threats, application updates, and exploding data volumes can seem like an impossible task. While there are tools to take care of many of these tasks, they are expensive and difficult to manage and maintain.

Sklar Technology has and continues to create a cost effective solution specifically for this issue. Through some of the latest technology advancements, Sklar Technology has developed a set of tools and disciplined processes that extend the reach of your capabilities, allowing you to maintain the control and protection your business requires with the support you need.

### Benefits

- ◆ Security for sensitive data
- ◆ Increased system reliability and performance
- ◆ Minimized downtime
- ◆ Simplified information technology support

### Features

- ◆ Certified engineers
- ◆ Nationwide coverage
- ◆ 24/7 system and security management
- ◆ State-of-the-Art technology
- ◆ Affordable

### O V E R V I E W

- ◆ Periodic risk assessments
- ◆ CIO planning and strategy services
- ◆ 24/7 system and security monitoring
- ◆ Email spam control
- ◆ Internet content control and usage reporting
- ◆ Systems performance monitoring and optimization
- ◆ Proactive management and prompt problem resolution
- ◆ 3rd party software maintenance and support services
- ◆ Continuous data backup and recovery services

## Digital Asset Planning

### Digital Asset Planning

No matter the size of your network of systems, all of us have essential data; information that we cannot afford to lose. Since most of the day is consumed by trouble tickets, reactive support response, trying to keep up with system patching, threats of infections, and system performance, it is hard to take time to plan. The Digital Asset Planning Process (DAP) was designed to provide a review process of business level issues involving the identification of important data, what types of threats exist, and how well guarded our systems are against downtime, hardware failure, malicious activities, and other environmental threats. DAP is a process that allows key stakeholders in your organization to work with industry experts in determining what risks are present in your IT environment and how you can take steps to reduce these risks.

### Risk Assessment

By combining security scanning and system diagnostics with the DAP process, our engineers are able to discover risks that will cause system downtime or loss of data. In DAP we look at how your systems were designed to protect and access data, while in the assessment process we uncover vulnerabilities that exist in the technology - patches that have not been applied, weaknesses in security architecture, and potentially unwanted malicious programs that may be giving outsiders access to your company's secret information. Using the results from all of these two procedures, Sklar Technology is able to construct a roadmap to significantly improve your environment.

“Sklar Technology’s security mitigation process and security service program was just what we were looking for.”

David Balducci, Pre Con/Advanta Staff

“...I have never been more comfortable with the security of my data and reliability of my network...”

Randi Power, Rue & Associates

“I have recognized that there are critical partners in business that are vital to the function of our business. Sklar Technologies is definitely one of them...”

Lela Cruz, Regent Stone Products

“It would be a perfect world if everyone had personalities and possessed the knowledge and customer dedication as your company extends...”

Rebekah Young, Peebles Golf Car Sales

“...Having used the services of two other companies, I feel like I’ve found the best and am a dedicated customer of Sklar Technologies.”

Ron Warren, Commonwealth Escrow

“...You have balanced ‘on the edge’ technology with relationship building skills that we have come to rely on and to trust.”

Wayne Clark, Lawrence Sanitary

## Optimization/Remediation

### Proactively addressing IT concerns

Using the roadmap we developed in the first step, 80% of our findings could be addressed through configuration changes, patching, and the removal of unwanted programs. The remaining 20% is often addressed through technology changes and updates that either reduce risk or enhance functionality of your systems. Sklar Technology specializes in helping organizations determine where changes can be made that will protect your IT investments and give you the security and functionality to grow your business.

### Optimizing and securing key business systems

Sklar Technology has assembled a team of security and systems specialists that can equip your business with highly available systems, secure applications and secure remote communications to meet your business needs. Through our disciplined services we can greatly reduce the likelihood that a security breach will occur. By doing this inherently your data systems will become optimized to peak performance.

## Interactive Support

### Ongoing support and maintenance combined with 24 by 7 system and security monitoring

Using state of the art technology and refined processes Sklar Technology can proactively keep systems operational and secure. Our 24 by 7 operation center delivers a virtual team of engineers working around the clock to provide insight into every system. Our focus on a protection, detection and prompt response to system and security issues can allow your business burden free relief. Our interactive support delivers full access to our complete team of highly skilled engineers for prompt remote or onsite support services.

### 100% Satisfaction

Improving our customers' experience is one of our core values. We invite you to contact our list of satisfied clients of which enjoy total IT burden relief through our service program. For more than 25 years Sklar Technology has been able to stay ahead of the fast paced curve of our forever evolving industry. We truly believe that we deliver the highest level of services in this market.
